Friendly, Personal Service... From the Comfort of Your Home.

Our SERVICES

Our Patient Centered Program provides you and your patients with the Technology, Tools and Professional Respiratory Services you strive for to deliver clinically proven care in the home.

Our Disease Management and Readmission Management programs help you meet and exceed your clinical and healthcare goals. Corner@Home engages the patient in their Healthcare and increases satisfaction.

Our TEAM

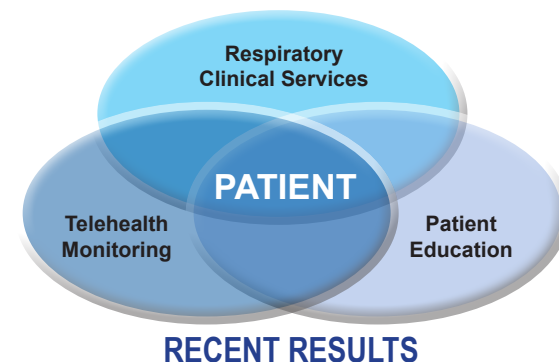

- Corner@Home improves the quality of life for our patients through clinically proven programs for reducing hospitalizations across a variety of chronic diseases, including COPD.
- Our success is linked directly to our Respiratory Therapists, using the newest technologies and best practices while working collaboratively with our Healthcare partners.
- Our Respiratory Therapists are available to you and your patients 24/7.
- Our Respiratory Care team consults with the hospital to develop a personalized care plan for each patient.
- During our collaborative treatment of your patient, we include in-depth education and/or Telemonitoring after hospitalization to improve compliance outcomes and satisfaction as well as decrease emergency department visits, hospitalizations and lengths of stay.

Our GOAL

Corner@Home's goal is to collaborate with you to complete the continuum of care for your patients. We do this by creating a close connection between our clinicians and patients.

Our Respiratory Coordinators and Clinical Specialists are trained and knowledgeable in the instruction and use of the medical equipment and supplies we provide. During our chronic disease management, patients receive the highest level of care as we minimize their chances of being readmitted back into the hospital and cuts down on emergency room visits.

We saved a local hospital 54 COPD readmissions over a 12 month period. The patients admitted into this program were "qualified" due to a previous history of 3 COPD hospital admissions in the previous 6 months. This is a significant savings!

We look forward to expanding this program to other Healthcare facilities.
